COLLECTION

monsoon roof

The iconic and innovative winged-roof makes the Monsoon Collection unique. Every aspect of the roof has been carefully considered and designed. The distinctive roof shape protects garbage and keeps the surrounding space clean and hygienic by:

- Stopping rainwater from filling the bin, preventing garbage putrefaction and bad odours. The shape of the roof tracks rainwater away from the edges, towards the support points and to the ground along the bin externals.
- Deterring birds and small rodents from entering, scavenging and perching on bins, a common problem in Australian cities and along coastal areas.
- Limiting the size of garbage items and preventing garbage overflow.
- Collecting cigarette butts using the integrated ash receptacle.
